```
An isolated polynucleotide (1) comprising a sequence (Ia) encoding a polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified sequences, given in the specification, or the complements of (Ia), is new Herbicide. (I) encodes disease-resistance factor polypeptides (II) and can be used, in sense or antisense orientation, to alter the expression of (II) in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by (I) are used to raise specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as as described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       632

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLG3 protein. The present sequence is cDNA from the soybean clone sgato.pk003.k23 which is homologous to COII. The COII and LLG1 proteins are involved in disease resistance. The COII and LLS1 DNAs of the invention may be used to alter the expression of COII and LLS1 protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLS1 proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ţ

Claim 2; Page 55; 74pp; English

Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLG1 protein. The present sequence is cDNA from the corn clone p0128.cpici34r:fis which is howologous to COII. The COII and LLG1 proteins are involved in disease resistance. The COII and LLG1 proteins are involved in disease resistance. The COII and LLG1 protein in cells, particialarly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLG1 proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides

```
CC An isolated polymucleotide (I) comprising a sequence (Ia) encoding a colypeptide (II) of at least 60 amino acids (aa) from any of 18 specified CC polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified CC sequences, given in the specification, or the complements of (Ia), is code and isease-resistance factor polypeptides (II) can be used in sense or antiseanse orientation, to alter the expression of (II) in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by (I) are used to raise specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as herbicides. This sequence encodes the rice COII protein created from a contig of rlz2.pk0027.h4, rl0n.pk099.p14 and rlon.pk0047.c5 as described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1544
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1604

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Expressed sequence tags (ESTB) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is cDNA from a rice contig homologous to COII. The COII and LLSI proteins are involved in disease resistence. The COII and LLSI DNAs of the invention may be used to alter the expression of COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and to screen for herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      67 CAGACACATGCAAGAAGCTACAAAGACTCAGAGTTGAGCGAGGAGATGATGATGATCCAGGTT 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1755
                                                                                                                                                                         Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays List protein. The present sequence is cDNA from the wheat clone wreln.pk0122.d3:fis which is homologous to COII. The COII and LISI proteins are involved in disease resistance. The COII and LISI proteins are involved in disease resistance. The COII and LISI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LISI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                129

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to nucleic acids (I) that hybridise under stringent conditions to any of 999 sequences (ABQ65424-ABQ66422) or their fragments. (I) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/biosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides, insecticides and antibiotics). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at sequence.html?DocID=999909770149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CTAGTCTTCAGAAACTTGAAATGAGAGGGTGTTTATTTTTCAGTGAACGTGCACTTGCTG 1814
                                                                                                                                                       libraries were found to be similar to CDNA encoding the Arabidopsis thaliana COI1 protein and the Zea mays LLS1 protein. The present sequence is cDNA from a wheat contig homologous to COI1. The COI1 and LLS1 proteins are involved in disease resistance. The COI1 and LLS1 DNAs of the invention may be used to alter the expression of COI1 and LLS1 protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLS1 proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       419

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     An isolated polynucleotide (I) comprising a sequence (Ia) encoding a polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified sequences, given in the specification, or the complements of (Ia), is new Herbicide. (I) encodes disease-resistance factor polypeptides (II) and can be used, in sense or antisense orientation, to alter the expression of (II) in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by (I) are used to raise specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as herbicides. This sequence encodes the wheat COII clone created from contigs when the method of intermethod of intermethod of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to nucleic acid molecules (AAH87645-AAH88116) that correspond to all or part of a mRNA molecule expressed in plant oil gland cells, especially peppermint and plant oil glands that produce terpenoid essential oils and resins. The mucleic acids are useful for genetically mapping a plant genome for genes expressed in plant oil gland cells and to suppress (for example by antisense suppression) or enhance their expression (for example by genetically transforming a plant cell with a replicable expression vector that expresses one or more proteins naturally expressed in plant oil gland cells). The nucleic acids are also fiseful for recombinant expression of plant oil gland cells; required for terpenoid essential oil and/or resin production in bacterial and/or yeast cells

The invention relates to a novel isolated polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance or its fragment having substantially the same activity as the full-length polypeptide. The polynucleotide of the invention is useful for conferring resistance or tolerance to a plant pathogen. The present sequence represents a gene conferring disease resistance used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               283 cadeadececrecaecresinecriceecrateriosaceaecececececececece

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1823
                                                                          The invention relates to nucleic acid molecules (AAH87645-AAH88116) that correspond to all or part of a mRNA molecule expressed in plant oil gland cells, especially peppermint and plant oil glands that produce terpenoid essential oils and reeins. The nucleic acids are useful for genetically mapping a plant genome for genes expressed in plant oil gland cells and to suppresse (for example by antisense suppression) or enhance their expression (for example by genetically transforming a plant cell with a naturally expressed in plant oil gland cells in naturally expressed in plant oil gland cells). The nucleic acids are also useful for recombinant expression of plant oil gland proteins required for terpenoid essential oil and/or resin production in bacterial and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                      Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is cDNA from the corn clone p0128.cpici34r which is homologous to COII. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI DNAs of the invention may be used to alter the expression of COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                <u>ب</u>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        260

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-170-496D-31
Sequence 31, Application US/09170496D
Patent No. 6555339
GENERAL INFORMATION:
APPLICANT: Behan, Dominic P.
APPLICANT: Chalmers, Derek T.
APPLICANT: Liaw, Chen W.
TITLE OF INVENTION: No. 655539-Endogenous, Constitutively Activated Human G Protein, TITLE OF INVENTION: No. 655639-Endogenous, Constitutively Activated Human G Protein, TITLE OF INVENTION: No. 655639-Endogenous, CONSTENT SEPRENCE: AREN-0040
CURRENT APPLICATION NUMBER: US/09/170,496D
CURRENT FILING DATE: 1998-10-13
NUMBER OF SEQ ID NOS: 294
NUMBER OF SEQ ID NOS: 294

Sequence 43, Application US/09299843A

Sequence 43, Application US/09299843A

Patent No. 6107475

GENERAL INFORMATION:

APPLICANT: Godiska, Ronald

APPLICANT: Gray, Patrick W.

APPLICANT: Schweikart, Vicki L.

TITLE OF INVENTION: No. 6107475el Seven Transmembrane Receptors

NUMBER OF SEQUENCES: 66

CORRESPONDENCE ADDRESS:
